# PREPARE TO START LOGBOOK

Feb 1 2010

Noticed no current logbook - (old one) (missing?)  
started this new one. (full?)

Looked at Mars, Sirius, Hyades  
decently, clear night,  
not as cold as I expected.

(Couldn't find  
binoculars, except  
the officer's cabinet  
ones)

10-29-10 Caroyn Talley, Ariel Delgado, Colin & Ross Taylor  
WE SAW... everything...

10-29-10 Adam Chu + Cody Dean  
We saw ... everything... and more

10-29-10 Brian Claus  
came to science center to do math..... looked at stars instead!

10-30-10 Talia Lank, Alex Ramek, Noam Hassenfeld  
The clouds obscured the noble eyes  
of Jupiter, ~~at Betelgeuse~~ and the Pleiades  
and yet we found, to our surprise  
Joy in each other's companies!

Stargazing tunes we played anon  
thereby to raise our spirit's mirth  
and looked upon bright lights long gone  
a silver'd bracelet o'er the earth!

10/30/2010 Just a wink to the North. Sun + light

11/15/10 4:30 AM Trip log:

Smashing success overall. <sup>woot</sup>

Minor negative point: returned car late. <sup>(also cops)</sup> :-)

Positive points:

- Awesome dark sky - Milky Way easily visible!

- Good site - easy parking spot and few lights and total view of sky

- Meteors! I saw ~5, Don & Sam saw ~20 combined

- ~~Good~~ Good number of people! Everyone seemed to have fun. Not too many.

- Perfect weather! (for November)

- Awesome snacks!!

- Tom Ree

- Don Reese → later than I expected (earlier?)

11/17/10 I just wanted to see the city and maybe the stars.

-Brittney Lewis

11/17/10 Just checking out stuff T.R.

Meteor shower peaks tonight. 34, but they say to expect 15 meteors/hour for "dark sky locations", which here is definitely not. I don't think I'll participate really. (The trip a few days ago was satisfying.)

11/18/10

Enjoyed a beautiful night amidst the 20 mph winds (at least that's what the weather reader said.) Great view of the skyline!

We didn't see any stars with the telescope. Our working hypothesis is that we have either reached the apocalypse or the sun's light is preventing us from seeing them. As far as my brother knows, no other signs of the apocalypse have been spotted. We'll check back again tonight.

Tomorrow is  
Valentine's day ~

Holly's visit to STARR after failing to attend HPAIR  
delegate party and waiting for Lamy for an hour  
and finally going up and down stairs twice to get the  
security woman ☺

It's quite amazing that I get to see stars through telescope.  
I have never had an opportunity to do this and I get to do  
this at Harvard with two of my friends that I made at  
Harvard. My friend who took Astronomy class apparently forgot  
how to maneuver the telescope and the dome.

She's making a phone call to her friend who also took the class  
to find out a way to operate the machine.

I wonder if she paid much attention in class at the time!!  
Anyways I'm really excited and will be very disappointed if we  
don't get to see stars. But this will be a very nice, unforgettable  
memory at Harvard. Thanks guys ♡

Dear Esther ♡

이반반동생! 많은이 꾸미고 대크~ ㅋㅋ I wish I could come and visit Boston  
frequently. I am very grateful to God that I got to know you  
and I really had a great time at HPAIR.

Though we failed to see stars through the telescopes  
going at the sky and stars on the balcony was great.  
I won't forget our 'Ya-ho' screaming!

Thanks Lamy for coming and helping us  
with moving the telescope! ☺

M79 in Lepus, nice little globular cluster.

M50 Open cluster with ~6 bright border stars and many faint interior ones that give it a glowing look.

M48 Bigger open cluster, with a string of bright stars at the south end and an arc of stars making a northern border - sparse but glowing interior.

 Also, like ~9 Asian girls ~~came in~~ knocked and asked if they could take a picture of themselves forming a pyramid on the observatory deck. Tom gave the okay so I let them in and they went out on the deck (where it's ridiculously windy). Apparently they're doing it for some kind of initiation event. The whole thing was mildly amusing, until one of them asked if one of us could take the picture for them. Tom pulled rank on me and I got to do the dirty work. It wasn't difficult, but I was forced to endure more than my fair share of mindless giggling. Wind gauge got up to 135 mph (!) but I'm thinking that's an exaggeration. I also like the sign with the emergency contact information. Good work Kristin.

The greatest blocking group of all time has invaded the observatory to determine their house by analyzing the positions of the stars. (The positions will cause gravitational ripples to flow across space and, by the butterfly effect, place us in our destined home for the next three years. And I'm cancer.) (I'm not cancer. Here we await the decision of the Most High and Glorious Housing Gods, and ask for benevolence.) I'm not a crab, but I hope tonight will be memorable for a long time.
