

4/1/10 7 PM - 10 PM

Risked life and limb on ladder to see Mercury and Venus. Very bad seeing. Venus shows no crescent shape right now. Came upon some fuzzy object nearby.

Sirus - nice blue-purple color. Sirus B not observable.

M41 - Fills objective even at low power. Mostly blue stars, one reddish in middle. ~50 stars.

M93 - ~40 bright stars and innumerable dim ones that flicker in and out of visibility. Cluster is more dense than M41.

M46 & M47 - also nice clusters. M47 much brighter and more exciting.

Great night for observing!

Just got back from Vermont! The skies were beautiful.
We saw the ISS fly by on 5/14/10 and used the
Astroscan + binoculars to look at Saturn, but the
resolution on the Astroscan isn't quite good enough -
I could barely make out the rings. I wanted to look
at Venus but it was blocked by trees in the
West. Lots of meteors though, and the Coma
Cluster was visible to the naked eye!

I am returning to the observatory:

- 1 Astroscan
- 1 26 mm Plössl eyepiece
- 1 6 mm Plössl eyepiece
- 1 15 F Plössl eyepiece (w/ Astroscan)
- 2 planispheres
- 2 red lights
- ↑ Tiron Sky Atlas

pair Alpen binoculars

I am also putting the 28 F Plössl eyepiece back in the
Astroscan bag.

Somebody left a PB&J sandwich up here. I am tossing it.
Red light (desk) was left on - I turned it off.

Thursday, May 27th, 2010

I came up, on this evening of commencement, with my mother and my sister to see the beautiful view of Harvard at night. The night is beautiful, with a cool breeze, in a way, signaling the beginning of something new. Harvard looked, for the first time, both familiar and mildly foreign to me. I will surely be back many more times before departing these Elysian fields.

Congratulations, Class of 2010!

HI! I'M LEAVING A MESSAGE ☺

"SILLY PENGUIN, FISH ARE FOR ME" - NITISH

Open Problem: $576 = (x!)^2$ Find x . And don't just circle it..

Last night of all, when yond same star that's
westward from the pole did illumine its
course in that part of heaven,
the bell, then beating ore —

Peace, peace, break thee off. Look where it comes again!

In the same figure like the king that's dead!

Thou art a scholar. Speak to it, Horatio!

When in disgrace with fortune and men's eyes

I all alone beweep my outcast state

and trouble deaf heaven with my bootless cries

and look upon myself and curse my fate,

wishing me like to one more rich in hope

Featured like him, like him with friends possess'd

Desiring this man's warts and that man's nose

with what I most enjoy contented least

Yet in these thoughts myself almost despising

Haply I think on thee, and then my state

like to the lark at day arising from sullen earth

sings hymns on heaven's gate, and my

sweet love remember'd such wealth brings

that then I'd scorn to change my state with kings...

Today is Saturday and there was wind that was blasty and stuff like that. Boston is gorgeous. A/V/Vall

10/16/10 Christiane Federby - Jupiter's still around, couldn't use telescope because of high windspeed, though...

10/16/10 Luke Burkhardt - Began opening dome, closed it. High wind Jupiter's still bright in the sky though...

10/16/10 Matt Dunley Mark Logan & Lynn Arneson

10/16/10 Peter Hedman - Came up because the moon looks gorgeous tonight - and Jupiter, too. Wonderful to see the sky.

John

10/17/10 Melvyn Price ☺

Abiola Lanifonu - Came up to observe Jupiter and practice newly gained skills using the telescope.
Winds died down enough to open the dome.
Night was clear and Jupiter & moons visible.
